

## FortiClient™

Endpoint Security Software Suite for PCs and Laptops

Datasheet

### Modular Security Client for PC and Mobile Endpoints

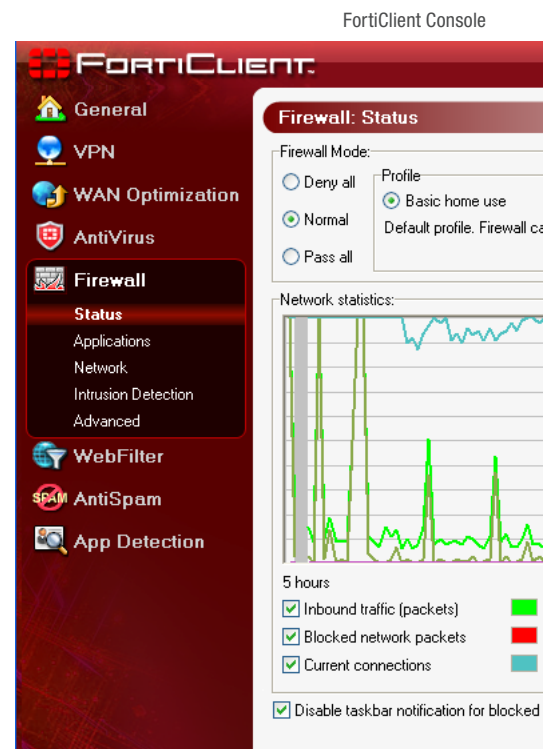

Personal computer (PC) desktop and laptop devices have empowered today's business users with the capability to access enterprise applications and mission critical data both in the office and on the road. While expanding productivity, remote access to the secure network perimeter increases security risk. Unfortunately, all devices are exposed to blended threats such as viruses, trojans, worms, spyware, keyloggers, botnets, spam and Internet attack. While utilizing network security architectures that isolate segments from one another can mitigate infection or breach, PCs within the same subnet can still potentially infect one another.

Users may inadvertently circumvent policy by bringing in portable storage devices, failing to keep antivirus signatures up-to-date, or even disabling personal firewall protection. Users accessing inappropriate and dangerous web content jeopardize device integrity, negatively impact productivity and create security and legal exposure. While point product security technology, such as antivirus agents, are available to protect devices from certain threats, such methods fall short from comprehensively protecting against blended threats and do not enforce content access guidelines.

FortiClient offers the full range of Fortinet threat protection to PCs and laptops, even when being used on insecure public networks. This comprehensive, modular protection suite secures desktops against viruses, trojans, worms and more. The FortiClient product is a client-based software solution designed to be used in connection with our FortiGate appliances to provide security features like Endpoint Control and WAN Optimization for enterprise computers. The feature set includes VPN (IPSec and SSL), antivirus/antispam, personal firewall, Web filtering, and antispam – each with separate modular installs to completely avoid any potential conflicts with other security software. Powered by FortiGuard security services, FortiClient has access to constantly-updated protection on a real-time basis against current and emerging threats.

### Features and Benefits

- Endpoint Control** Ties into your FortiGate appliance to monitor and enforce endpoint security policy at the network firewall, including FortiClient version enforcement, ensuring signatures are up-to-date and personal firewall is enabled.
- Application Detection** Extends Endpoint Control to allow admins to detect if endpoints run applications against security policy and automates denial of network access.
- Endpoint Management** Ties into your FortiManager appliance to discover, deploy, update and monitor clients on the network. Ties into your FortiAnalyzer appliance for advanced reporting that leverages FortiClient logs.
- Secure IPSec VPN Client** Empowers mobile laptops and remote desktops with the capability to access enterprise applications securely with DES / 3DES encryption.
- SSL VPN Tunnel Client** Connects securely from anywhere for remote access to web applications behind the firewall, protecting confidential communications.
- WAN Optimization** Speeds services like VPN for remote PC connections over the WAN.
- Antivirus & Antispyware** Provides comprehensive protection against viruses, spyware, keyloggers, Trojans, adware and grayware on the client, with updates by FortiGuard.
- Powerful Personal Firewall** Monitors network traffic and enforces the appropriate application access control in your security policies.
- Web Filtering** Provides real-time web content access enforcement to ensure compliance.
- Advanced Antispam** Built in antispam that incorporates into MS Outlook to reduce unsolicited emails, email-borne viruses and phishing attempts.

## FortiClient Deployment Scenarios

### Fortinet Security Framework

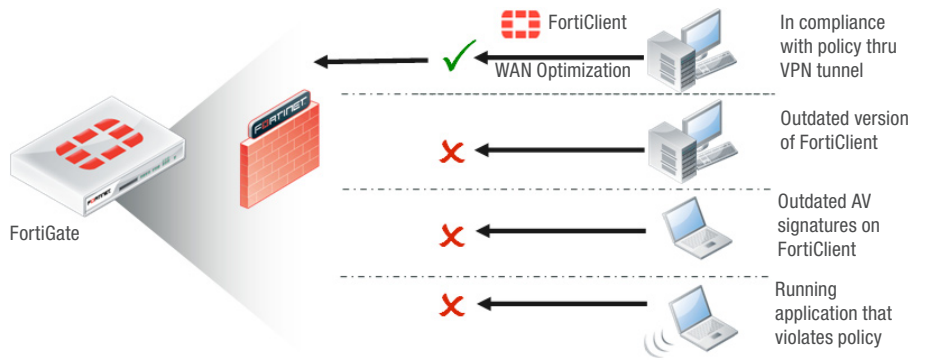

FortiClient plays an important role in completing most any FortiGate installation. This advanced endpoint protection solution helps close potential security gaps in network architecture, strengthening your security posture by adding an essential layer of protection to PCs and laptops connecting from the LAN or from off-site remote locations. FortiClient provides integration with FortiGate, FortiManager and FortiAnalyzer.

### Enhances FortiGate Endpoint Control

FortiGate users benefit from endpoint control, enforcing a policy based approach to FortiClient use.

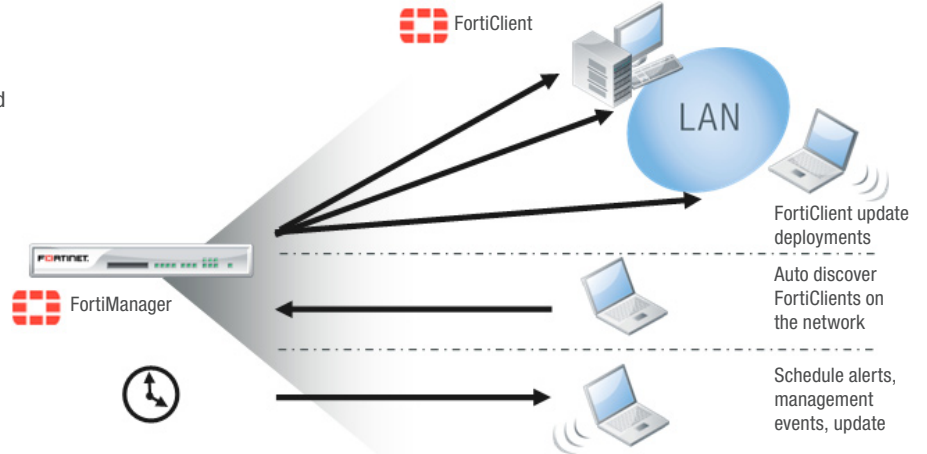

- Endpoint Control with Application Detection
- VPN (IPSec and SSL)
- WAN Optimization

### Eases Deployment with FortiManager

FortiManager users benefit from streamlined FortiClient deployment and centralized management.

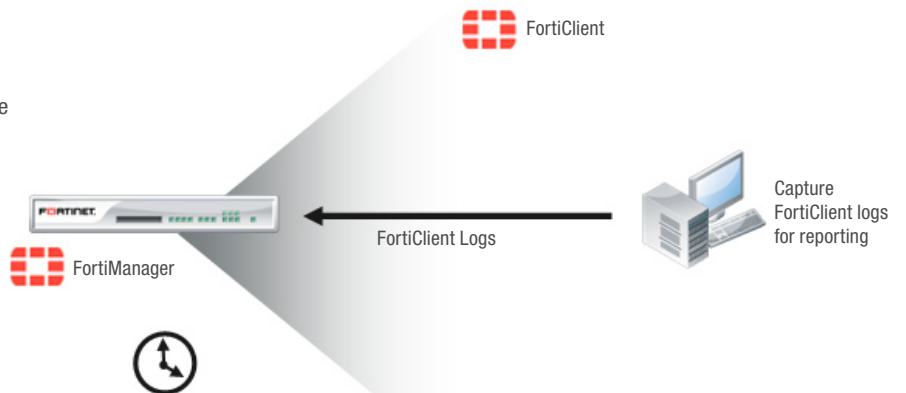

- Bulk Deployments of FortiClient Updates
- Auto Discovery of New FortiClients
- Set Management Events and Alerts

### Integrates with FortiAnalyzer Reporting

FortiAnalyzer users benefit from FortiClient log capture for integrated endpoint reporting and analysis.

- Endpoint Security Reports
- Automate Report Scheduling
- Vulnerability Analysis

## Modular Installation and Targeted Scanning

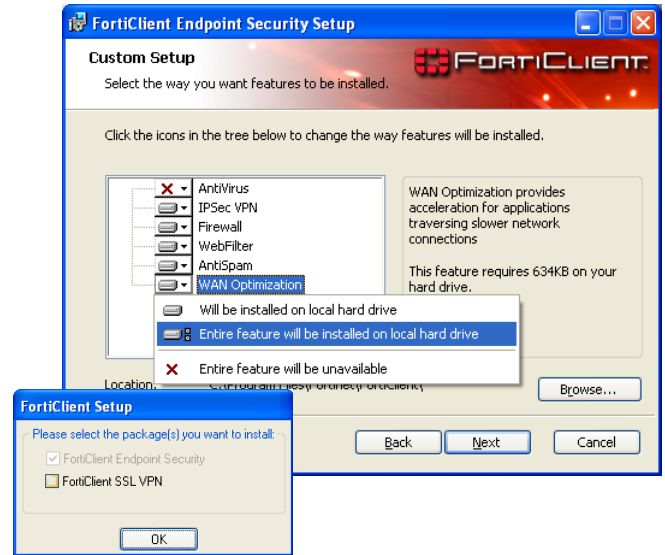

### Avoids Potential Security Conflicts

FortiClient includes a modular installation feature to avoid potential conflicts with other client security. Preserve existing client security investments while leveraging additional client security features. Administrators can pick and choose. FortiClient offers a number of tools to manage multi-client installations with FortiManager.

- Install FortiClient using Active Directory Server
- Create a network installer image
- Install FortiClient as part of a cloned disk image
- Install FortiClient on Citrix Server for web filtering
- Create a Custom Installation Package with FCRepackager (included)

### Targeted Scanning

FortiClient also can target scanning for faster scan times, including exclusion of Exchange or SQL Server filesystem files and extensions.

## FortiClient Editions

Fortinet offers FortiClient in two editions: a standard edition for small business and consumers, and a premium edition for mid-sized enterprises and other large organizations. Both editions can be used either as a stand-alone product, or in combination with FortiGate and other Fortinet products. The premium edition includes antispyware, enables central management with FortiManager, and comes with Enhanced Support.

Comparison	FortiClient Standard Edition	FortiClient Premium Edition
Antivirus/Antispyware	Yes	Yes
Personal Firewall	Yes	Yes
VPN (SSL and IPsec)	Yes	Yes
Web Content Filter	Yes	Yes
FortiGuard updates	Yes	Yes
Endpoint Control w/ Application Detection*	Yes	Yes
WAN Optimization*	Yes	Yes
Antispyware	No	Yes
Extended Signature Database Updates	No	Yes
Logging	No	Yes
Central Management**	No	Yes
Enhanced Support	No	Yes

\* Required FortiGate  
 \*\* Required FortiManager

## FortiClient Features

FortiClient supports the following features:

- **Central management of devices using FortiManager system**  
 Provides enforcement of security policies and configuration lock down of devices with a password override feature available. Bulk installs via Windows Installer script feature for FortiClient.
- **Local antivirus, antispyware and Web content filtering signature updates**  
 FortiManager's Update Manager provides local hosting and deployment of FortiGuard Security Subscription Services for FortiClient. FortiGuard updates include antivirus/antispyware, web content filtering, application detection and antispyware.
- **Single security agent available in two modes**  
 FortiClient supports a "suite" mode which includes the complete security feature set. FortiClient also supports a "modular" install that lets you install only what you need.
- **Flexible product packaging**  
 FortiClient is available in enterprise bundles at volume pricing levels based on quantity and level of support services. Fortinet provides a complete multi-layered suite of endpoint security features in FortiClient at the price point of traditional single antivirus security agents.

### Centralized Policy Management

Fortinet's management system makes deployment, configuration and policy control quick and easy.

### Deployment Scalability

FortiClient deployments can scale to an unlimited number of devices and receive security subscription updates from the FortiGuard update service or from the FortiManager system.

### Low Total Cost of Ownership

Unlike point product agents that provide a single security feature, FortiClient is a true unified security agent that bundles all the necessary capabilities into a single low cost and easy to manage application.

## TECHNICAL SPECIFICATIONS AND FEATURES

### GENERAL

Endpoint Control with Application Detection  
Anti-Leak Banned Word List  
Desktop Antivirus  
Remote VPN Client  
WAN Optimization Client  
Personal Firewall  
Antivirus Scanning / Cleaning  
Quarantine Infected Files  
Registry Monitoring  
User-Definable File Types for Scanning  
Scans Compressed Files  
Scheduled Scanning  
Antivirus and Spyware Scanning  
Manual and Scheduled Updates  
Antivirus Logs

### CENTRALIZED MANAGEMENT

Client Version and Status Monitoring  
Update Server Override  
Central Logging and Reporting  
Configuration Lockdown  
Group Configurations

### USER AUTHENTICATION

Extended Authentication (XAUTH)  
Management, Logging, and Monitoring  
Searchable VPN Logs  
VPN Tunnel Diagnostics Test  
VPN Connection Monitor  
Packet Logs

### ANTIVIRUS / ANTISPYWARE

Configurable File Types to Scan Including Files with No Extension  
Manual Scan  
Real-time Protection  
Automatic Submission of Suspicious Files to Fortinet  
Notification Virus Signature is Out of Date  
Email Scanning Incoming and Outgoing Including Attachments  
Heuristics Scanning  
Virus File Quarantine  
**PERSONAL FIREWALL**

Configurable Network Security Zones  
Intrusion Prevention  
Advanced Firewall Rules  
Security Levels: Low, Medium, and High  
Application Access Control  
Intrusion Blocking  
Zone-Based Traffic Control  
Active Connection Monitor

### ANTISPAM

Customizable Banned Word List  
Customizable Black/White List  
Continuously Updated Database  
Automatic Submission of MIS-Rated Emails

### CRYPTOGRAPHY

3DES And DES  
SHA-1 And MD5  
AES (128, 192, 256-Bit)  
PKI  
PKCS #7 Certificate Chains  
PKCS #12 Certificate Import

### IPSEC VPN

Autokey IKE (Preshared) / Authkey IKE Certificate  
ESP and AH  
NAT Traversal  
Main and Aggressive Mode IKE  
Redundant Gateway Support  
DHCP over IPsec  
Manual Virtual IP  
Multiple Remote Networks  
VPN Policy Retrieval from FortiGate® Unit  
Dead Peer Detection  
Simplified Configuration Process  
Split Tunneling

### LANGUAGE SUPPORT

English • French • Japanese • Korean • Simplified Chinese • Slovak

### SSL VPN

IKE Negotiation  
Retrieve Dropped Connections  
VPN Monitor  
Policy Compliance Tool

### WEB CONTENT FILTERING

Multiple Categories  
HTTPS Site Inspection/Blocking  
Password Protected Config  
Customizable Block Profiles  
Predefined Usage Profiles for Adults and Children  
User Definable Block / Bypass List  
Continuously Updated Database

### SYSTEM REQUIREMENTS

To install FortiClient you need:  
Pentium processor or equivalent  
Compatible operating system and minimum RAM:  
• Microsoft Windows 2000: 128 MB  
• Microsoft Windows XP 32-bit and 64-bit: 256 MB  
• Microsoft Windows Server 2003 32-bit and 64-bit: 384 MB  
• Microsoft Windows Server 2008 32-bit and 64-bit: 512 MB  
• Microsoft Windows Vista 32-bit and 64-bit: 512 MB  
• Microsoft Windows 7 32-bit and 64-bit: 512 MB  
Compatible email application for the AntiSpam feature:  
• Microsoft Outlook 2000 or later  
• Microsoft Outlook Express 2000 or later  
Compatible email application for the AntiLeak feature:  
• Microsoft Outlook 2000 or later  
100 MB hard disk space  
Native Microsoft TCP/IP communications protocol  
Native Microsoft PPP dialer for dial-up connections  
Ethernet connection

### FORTIGUARD® SUBSCRIPTION SERVICES

- Automatic updates
- Complete Wildlist protection for 30,000+ viruses
- Real-time signature updates for protection against over 5,100 threats.
- Web filtering for more than 47 million URLs with more than 70 languages supported.
